*Graduate Student Researcher* *Advisors - Yoshua Bengio and Michael Mozer*  
– Working on deep learning research with a focus on building better models for out-of-distribution generalization.
- **MILA - Quebec AI Institute, Montreal** Aug 2020-Aug 2021  
*Research Intern* *Advisors - Anirudh Goyal and Yoshua Bengio*  
– Worked on designing better communication/interaction frameworks for modular deep learning models.
- **Indian Institute of Science, Bangalore** Jan 2020 - July 2020  
*Research Intern* *Advisors - Aditya Gopalan and Himanshu Tyagi*  
– Built a data analytics and visualization platform from scratch for monitoring and analyzing the pollution levels in the city of Bangalore, India.

- Implemented various regressive prediction algorithms using machine learning as a part of the platform to predict the concentration of hazardous pollutants in the atmosphere.
- **Google Summer of Code [Final Report]** May 2019 - August 2019  
*Student Developer*
  - Built support for various recurrent neural networks(*LSTM*, *GRU*, *Vanilla RNN*) in C++ for **ChainerX**. Utilized CUDA and CUDNN for the corresponding GPU-compatible implementations of these models.
- **MIDAS Lab, IIIT Delhi** April 2019 - Aug 2020  
*Research Intern* *Advisor - Rajiv Ratn Shah*
  - Designed a method for profiling hate-speech on Twitter by utilizing information about the community to which a user belonged on Twitter along with the text of the tweet.
  - Introduced a novel data augmentation technique for NLP and Speech in which new training examples can be created on the fly by interpolating pre-existing examples in the feature space.
- **Ubisoft** May 2019 - July 2019  
*Automation Intern*
  - Created a novel algorithm for detecting *UI bugs* in video games using deep learning techniques like semantic segmentation and depth estimation which achieved an accuracy of 85% and eliminated the need for manual detection of bugs.
- **Project Manas(AI/Robotics team at Manipal Insititue of Technology)** Feb 2018 - Feb 2019  
*AI Researcher*
  - Implemented deep reinforcement learning algorithms such as *DQN*, *PPO*, and *A3C* on small scale robotic agents and various games.

## PROJECTS

---

- **Implementation of the paper - Recurrent Independent Mechanisms [code] [50+ stars]**
  - Implemented the model presented in the paper - *Recurrent Independent Mechanisms(RIMs)*. Reproduced the results for the MNIST task in the paper. Also implemented proximal policy optimization(PPO) using the proposed model and tested it on the gym-minigrid environment.
  - Successfully demonstrated that RIMs generalize better to distribution shifts than LSTMs.
- **Implemented domain randomization for AI Habitat [code]**
  - Dived into the large AI Habitat codebase to implement domain randomization from scratch so that it could be used to train RL models like PPO.
- **BERT Baselines for COQA [code]**
  - Implemented various language models like BERT, SpanBERT, and DistilBERT for the reading comprehension task from the COQA dataset.
- **Parallel implementation of T-SNE [code]**
  - Leveraged GPU acceleration using CUDA to implement a parallelized version of T-SNE.
- **Pruning Neural Networks [code]**
  - Implemented weight pruning and unit pruning on a simple fully-connected neural network. Showed that up to **90%** of the weights can be pruned without a considerable drop in accuracy. Also utilized the sparsity to speed up inference by upto **30%**.
- **DeepJava [code]**
  - Designed a deep learning library from scratch in Java. It contained a few commonly used operations such as CNNs, MLPs, softmax, sigmoid, relu etc.
  - My library automatically builds a dynamic computation graph of the operations defined by the user and supports automatic differentiation of this computation graph to enable training through backpropagation.
